

REGENERATION

Renew, revitalise, respect – our approach to regeneration.

The renaissance of towns and cities across the UK has been a key development focus for a number of years. DLA excels at identifying and realising the potential of places that, for a variety of reasons, are failing to reach their potential. We employ many techniques from charettes to stakeholder engagement events to explore options for breathing new life into neighbourhoods, town centres and city quarters, ensuring that they can accommodate the needs and aspirations of users. Importantly we help identify those qualities, sometimes forgotten or overlooked, that help give a place identity and character and work hard to establish a new “pride in place”.

Ensuring that regeneration schemes are grounded within a robust implementation strategy is key to the success of projects, and our work on Development Plan Documents - including preparing Area Action Plans and Supplementary Planning Documents - is now delivering beneficial change in many towns and cities.
