

URBAN DESIGN AND MASTER PLANNING

Creative thinking is at the heart of our business.

As a core service we provide a wide range of urban design and master planning skills to public and private sector organisations and agencies across the UK and elsewhere. We master plan and design new settlements, urban expansion schemes, town and city centres, as well as defining new neighbourhoods within existing communities.

We are adept at undertaking robust land use analysis and preparing land use budgets into one coherent package, using GIS to test and retest a variety of development scenarios and land use options.

Our skilled urban designers, architects and landscape architects are expert at identifying opportunities and realising innovative design solutions that are sensitive to context and will establish new neighbourhoods, urban quarters and settlements that fulfil the contemporary needs of communities, becoming valued places within which people will want to live, work and spend time relaxing. Importantly we also work hard to ensure that our proposals are viable and deliverable, able to withstand changing conditions and provide a flexible yet robust design response.
